

# EON-XR 9.4 update1

## Changes

### App

#### Transparency

Fixed a transparency issue where objects with transparent parts were opaque.

#### Lighting

Fixed a lighting issue on scanned meshes where the ambient lighting was missing resulting in darker than usual shading.

#### Animations

Fixed an animation issue where separate animation sequences with different starting time were played all at once.

#### 3D Assessment

Improved the UI on 3D assessment for single mesh objects. You can now use touch in addition to laser buttons to pick the annotation dots while doing 3D assessment (where the blue color is used to highlight picked dots).

**Note:** using annotation dots in 3D assessment is currently only supported on single mesh objects. It will be expanded to support multi-part meshes in the future.

#### Additional Text-to-Speech languages

With this update, we have added 49 additional languages for the Audio Text-to-Speech activity such as Bulgarian, Finnish, Greek, Hungarian, Thai, Ukrainian, Vietnamese and more.

#### Lesson loading with Chinese/Japanese characters

Fixed an issue where lessons with some Chinese/Japanese characters on the lesson name cannot be loaded.

## **Library page**

Improve loading of the library page from taking 6 seconds to 1 second.

## **Import 360 image**

Fix issue where importing 360 image failed.

## **Web**

### **LTI 1.3**

Added support for user accounts created on EON-XR to use names provided by LMS.
